

## Intrasea

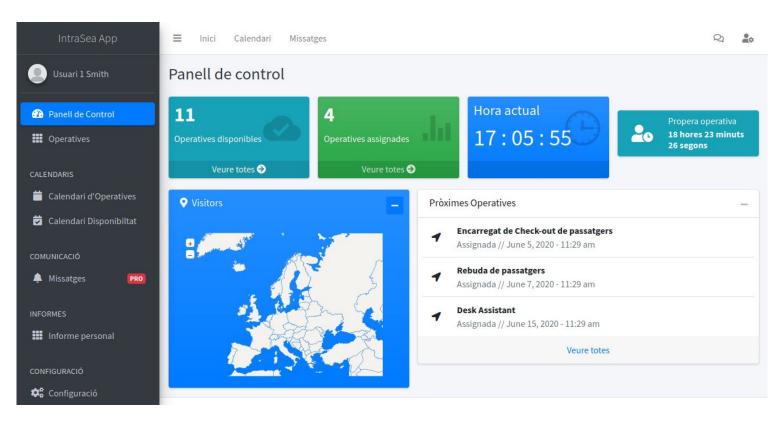

An All-In-One platform for business management

Ismail Ait, Sonia Vargas 2DAW 2019-2020

## **Pitch**

## A snapshot of the product

## Project abstract: a brief summary

Aquest projecte té com a objectiu facilitar la gestió d'empleats d'una empresa internacional.

Hem resolt aquest repte creant una aplicació web de gestió de recursos humans, donant als empleats una eina per assignar-se tasques, crear un perfil personalitzat i visualitzar estadístiques relatives a aquestes.

## Used technologies

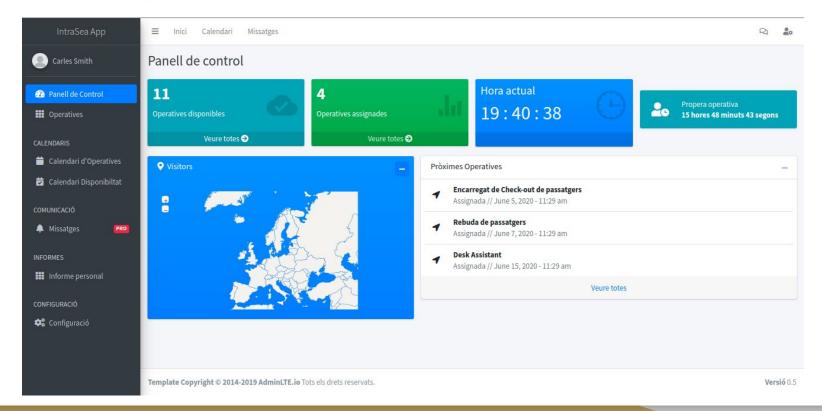

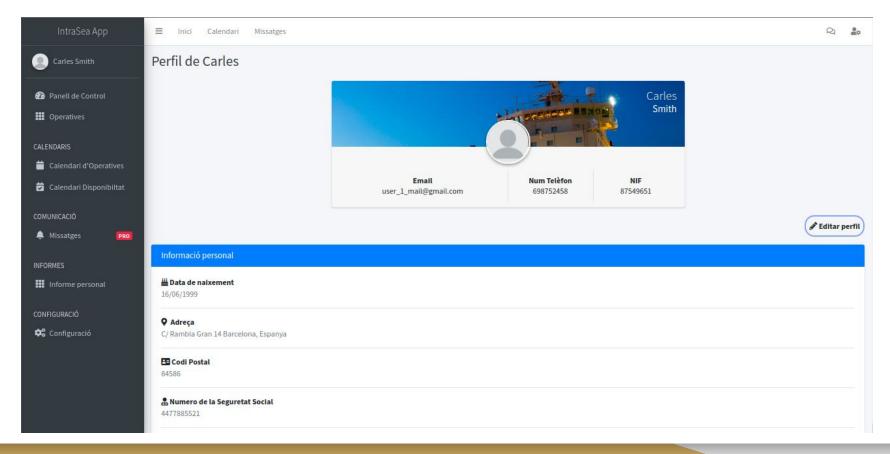

### Visual representation of the final product

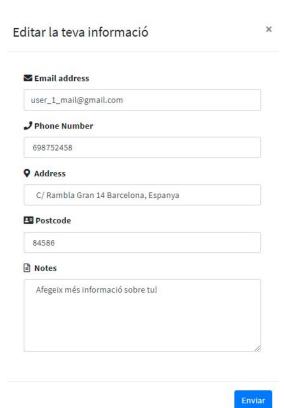

#### The main control panel

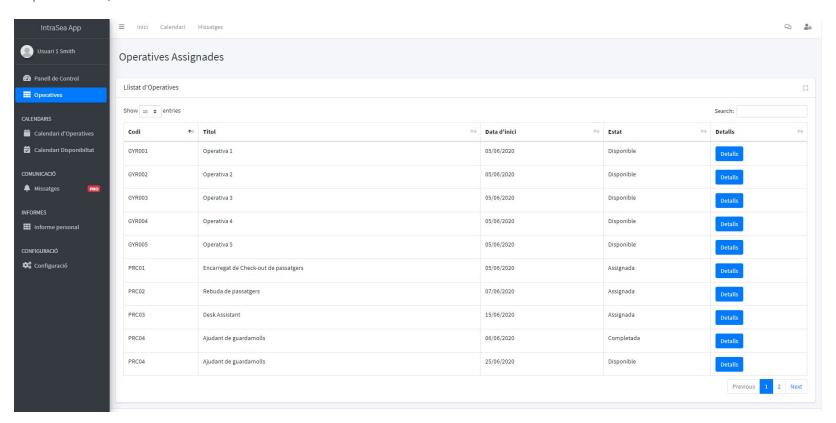

#### User profile

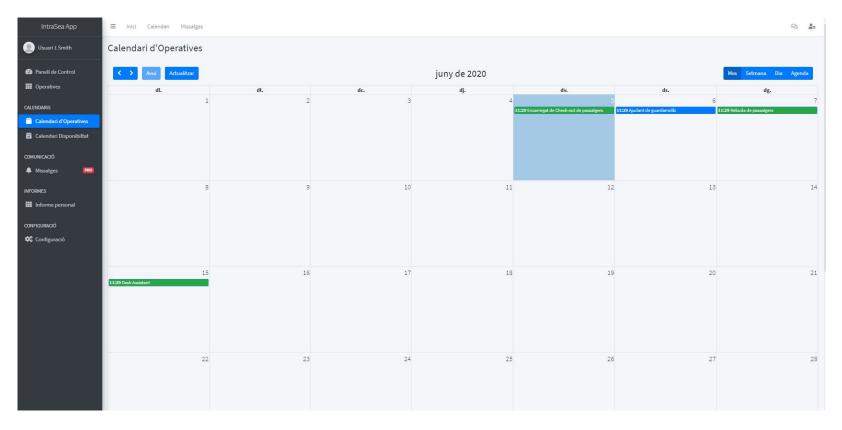

#### Profile -> Edit profile

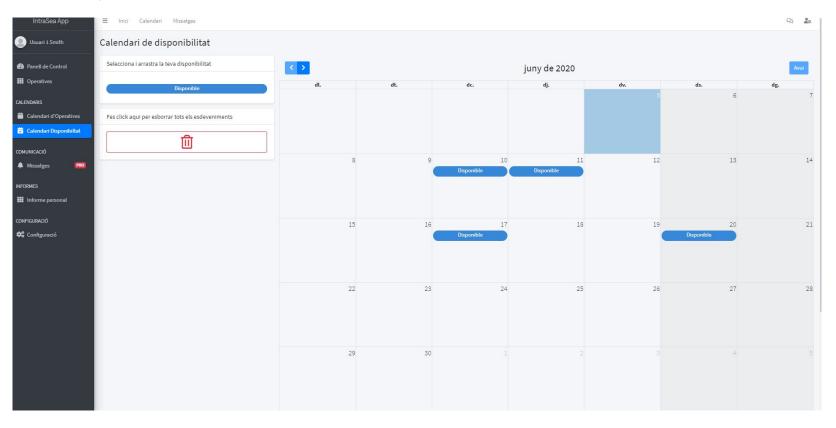

#### Operations / Tasks

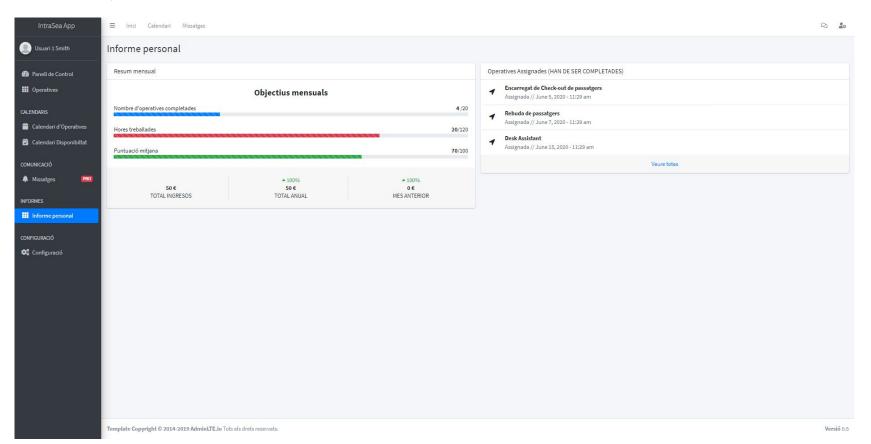

#### Interactive operations calendar

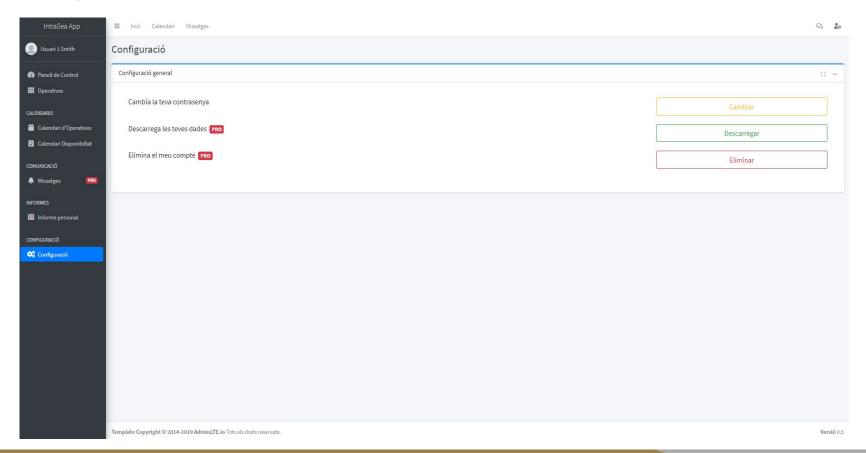

#### Availability calendar

#### Personal report

#### Settings section

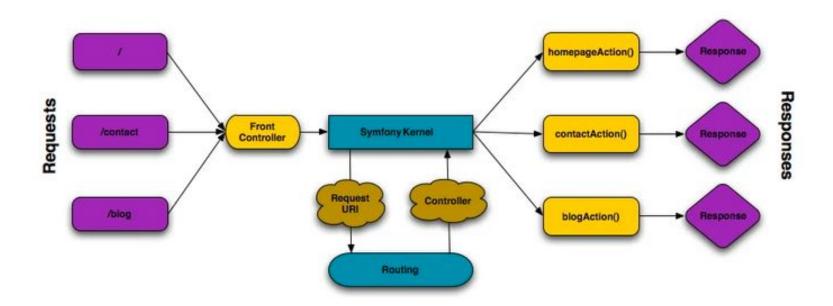

#### Settings -> Change password

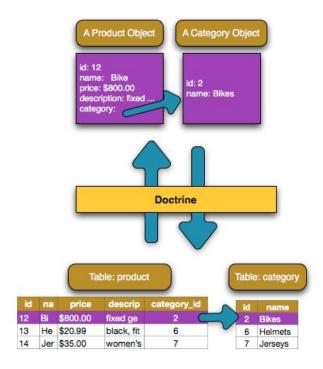

## Issues we encountered

- Find a design pattern that allows an easy upgradability for new features
- Design a database model that fits our business logic and data structure
- Find out how to organize and generate all the needed assets using the fastest method
- Set up and install Javascript libraries and plugins following a modular structure
- Investigate the best way to render the most dynamic data in the platform (using an API or the Twig renderization)

## An upgradable architecture

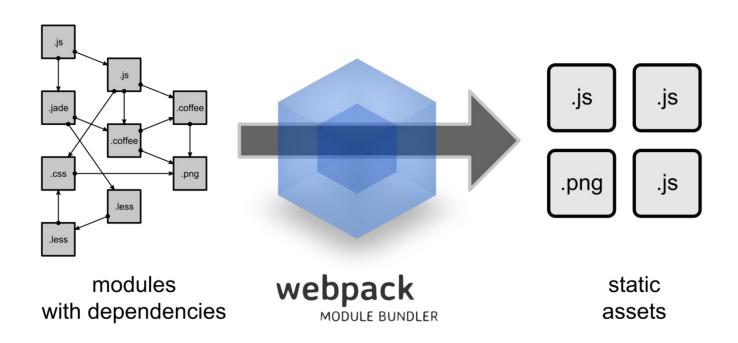

## Database model

## How we managed the assets
